(54) Title: MIXING DISPENSER

(57) Abstract: A dispenser (1) comprises a container having a first aperture (not shown) therein and a first closure means (not shown) for sealingly closing the first aperture and is characterised in that the container has a second aperture (3) and a second closure means (not shown) for closing said second aperture, said second closure means including a pressing means (5) operable to press inwardly towards said second aperture (3), a blister pack (6), locating means (8, 9) locating said blister pack to span across said second aperture (3) and sealing means (7, 10) sufficient to ensure the second aperture is sealingly closable against leakage of the intended contents of the dispenser. The construction and arrangement is such that in end use the container holds a first substance and the blister pack holds a second substance and when the pressing means is pushed the blister pack is ruptured enabling the mixing of the contents thereof with those of the container.
